# CyberLock Protects Single- and Multi-space Parking Meter Cash

**CORVALLIS, OREGON, May 22, 2009**—CyberLock, manufactured by Videx, brings key control and an auditing to single- and multi-space parking meters simply by replacing the meter's existing mechanical lock cylinder with a CyberLock electromechanical cylinder. With CyberLock, parking operators gain control over when and by whom collections can be made.

The CyberLock system includes an electronic lock cylinder that has no keyway to pick and an electronic key that cannot be duplicated. Each time the key opens a lock, a record is stored in both the key and the lock, creating a detailed audit trail of openings and unauthorized attempts to enter. The system's audit reporting makes CyberLock very powerful when the protection of cash is the primary consideration.

The key contains permissions on what locks the key can open, with a schedule of days and times it will open those locks. Each key can be set with dates and times to begin and end operation and a 'missing' key can be quickly deactivated.

CyberLock electronic cylinders are manufactured with stainless steel components. The use of stainless steel parts enhances the performance of lock cylinders in all types of weather including the wet, dirty, and sometimes corrosive environments in which parking meters must operate. CyberLock cylinders are built to survive the most unfriendly operating conditions, making them an excellent choice for the parking industry.

The CyberLock product line includes a family of intelligent padlocks and an extended line of electronic cylinders for parking meters, transit fare boxes, coin vaults, toll booths, door lock hardware, and more.

### About Videx
