Bluetooth® Compatible CyberKey for Mobile Access Authorization

Robust, On-Demand Access Control

Corvallis, Oregon, August 28, 2009—Videx (www.videx.com) announces CyberKey® Blue, a rechargeable key that uses Bluetooth® technology. The combination of CyberLock technology and Bluetooth technology provides a unique solution. Now CyberKey users with a BlackBerry® phone can update their key with a new access schedule and download their audit information while in the field.

The Bluetooth compatible key is a perfect solution for companies with employees that are mobile or located in remote locations, or when extreme security is required, such as with technicians servicing ATM machines. Rather than carry a key that is programmed to open all the ATM locks on that day's route, the service technician can now carry a key that receives authorization on-the-fly to open a specific lock on a specific machine at each location. Only when at the machine do they receive access permissions via their BlackBerry phone.

CyberKey Blue is the newest addition to the CyberLock access control system. With CyberLock, nearly any type of lock can be converted to a higher-security electronic lock simply by replacing the lock's mechanical cylinder with the CyberLock electronic cylinder. The CyberLock system consists of Web Enterprise software for managing the locks and keys, CyberLock cylinders that have no keyway and programmable keys that cannot be duplicated. All CyberLock cylinders and keys record openings and unauthorized attempts to enter. This detailed audit reporting can be extremely valuable to any organization.

About Videx

Videx designs and manufactures CyberLock access control products that are shipped worldwide from their headquarters located in Corvallis, Oregon. For more information about CyberKey Blue and Web Enterprise software, please contact Videx by phone at 541-738-5500, by fax at 541-738-5501, by email at sales@videx.com, or visit our web site at: www.videx.com.
