The CyberLock Flex System Makes Its Debut at ISC West

Last week was an exciting one for Videx. We presented the new CyberLock Flex System for the very first time at the ISC West Exposition in Las Vegas.

The CyberLock Flex System is a family of access modules that expands CyberLock's award-winning access control solution and opens the door to countless access possibilities. All the benefits of CyberLock programmable keys and electronic locks are now complemented by this new modular system that brings smart padlocks, electronic locks, Flex access modules, and a hardwired door control system (to be released soon) together under one powerful access management structure.

For more information on the new CyberLock Flex System, click [here](#) or copy the following link into your web browser:

Keeping an Urban Church Safe

Established 20 years before Washington State achieved statehood in 1889, Seattle First Presbyterian Church was once the largest Presbyterian Church in North America with a membership that exceeded 8,000. Today, the church is an aging facility the City of Seattle has literally grown up around. First Presbyterian has experienced on-going security issues that facility managers in an urban setting often encounter: break-ins, thefts, and vandalism. Dedicated to reaching out to their culturally diverse community, church leaders were determined to make the church a safe and secure place to be.
